League

STAGE 3 · CASE STUDY

AI-Native Growth Marketing Working Session

Director, Growth Marketing · Candidate brief · Take-home plus a 60-minute session

The situation

League is a post-Series D B2B SaaS company selling an AI-powered healthcare platform to enterprise buyers of 1,000+ employees. Long cycles, multiple decision-makers. The stack is Salesforce, Pardot, Google Analytics, SEMrush and Demandbase.

Part 1. Walk us through your AI setup (15 minutes)

Share your screen and walk us through the AI environment you actually use: Claude Cowork, Claude Code, Codex, whatever it is. Real workspace, real projects, real mess. Cover four things.

- How you set up a project. Folder and context structure, standing instructions, how you avoid re-explaining yourself every session.
- How you set up MCPs or connectors. Which you run, why you added them, and one you tried and dropped.
- One agentic workflow you built end to end. What triggers it, what it does, where it hands back to you, and how it broke the first time.
- The business impact. What it replaced and roughly what it saved. Estimates are fine, but show the arithmetic.

If you cannot show something for confidentiality reasons, describe it and show us something adjacent. If your setup is early, show the early version.

Part 2. Funnel & Budgeting Case Study (45 minutes)

For this exercise, assume Paid Marketing runs through six channels: Google Demand Gen, LinkedIn, Content Syndication, Webinars, Events and Demandbase. FY26 media spend was about $567,000 (synthetic data).

You are the incoming Director, Demand Generation. The question on the table: how should we spend?

Expect us to ask how you built it, not just what you concluded. Useful things to be able to show or say:

- The session or prompt history behind the analysis, if you used AI to do it.
- Why you made the data decisions you made, and what you chose to ignore.
- What you tried that did not work, and what you threw away.
- What the AI got wrong that you had to catch and correct.
- Which of your own numbers you are least confident in.

Task A. Build a funnel view

Using the lead-level data, build something we can look at showing MQL to SQL to SQO to Closed Won across the six channels, and whatever else you think matters. For the output, build an Interactive artifact, dashboard, worked spreadsheet, etc.

Task B. Allocate the budget

Recommend how you would allocate H1 FY27 paid media, and say whether the targets are achievable. Capacity caps and full constraints are in the data package.

Paid media budget	MQL target	SQL target	Already committed
$280,000 (flat)	300	55	$45,000, HLTH 2026

Show the channel-level math, your assumptions, and what you would stop doing to fund what you would start.

What is in the package

File	Contents
00_READ_ME_FIRST.md	Context, funnel definitions, field notes, constraints, targets
01_leads_fy26.csv	Lead-level extract, FY26 (Jul 2025 to Jun 2026), 765 rows
02_ad_spend_fy26.csv	Monthly paid media spend by channel
03_gtm_data_package.xlsx	The same two tables as a workbook

All synthetic, fabricated for this exercise. Not League customer, member or production data.

In the session (60 minutes)

Time	What happens
0:05 to 0:20	Part 1. You walk us through your AI setup, live and on screen
0:20 to 0:35	Part 2. You present your artifact and recommendation, uninterrupted
0:35 to 0:55	We ask questions, including how you built it
0:55 to 1:00	Your questions

How we score it

Dimension	What a strong answer looks like
Data judgment	Notices what is wrong with the data before concluding from it
Insight over reporting	Reaches a so-what that changes a decision
Channel economics	Reasons in cost per SQL and pipeline contribution, not cost per lead
Trade-off making	Names what gets cut, and what the cut costs
AI fluency	Uses tools fluently and knows where to stop trusting them
Ownership of the build	Can reconstruct any step and name what the AI got wrong
Executive communication	Lands the recommendation in two minutes

Ground rules

- Use any AI tool you want. Heavy AI use is the expectation.
- About two hours of work.
- Be ready to reconstruct any part of your analysis on the spot.
- You will not answer everything. Nobody does. We are watching what you prioritised.
- If a target looks wrong or a question badly posed, say so. That is a signal, not a risk.

Questions on the data or the brief: contact your recruiter. We would rather answer a clarifying question than have you guess.
